

Ifö Electric in Bromölla, on the border between Skåne and Blekinge, by the beautiful Ivö lake, has concentrated on ceramics – Nature's own material – for more than 100 years. After decades in the grip of plastic and metal, both electricians and end-users have discovered the superior properties of ceramics. Easier to keep clean, longer lifespan, enhanced resistance to heat, not prone to discolouring and also withstand damp, cold and aggressive environments.

GLOBE • WHITE MATT OPAL • 1-6133

The globes were originally designed for our Ifö Contrast light fittings series, but have become so popular that we have decided to also sell them separately.

The glass is seamless, executed in matt opal and of the highest quality. The Ifö Contrast series has grey bases but the globes may equally well be used in conjunction with white bases.

In addition to serving as spares, the globes may also be used where there are fittings with 84.5, 99 and 185.5 mm glass threads installed. It is then possible to achieve a modern look in an old installation by means of the simple measure of changing the globe.
