

Ifö Electric in Bromölla, on the border between Skåne and Blekinge, by the beautiful Ivö lake, has concentrated on ceramics – Nature's own material – for more than 100 years. After decades in the grip of plastic and metal, both electricians and end-users have discovered the superior properties of ceramics. Easier to keep clean, longer lifespan, enhanced resistance to heat, not prone to discolouring and also withstand damp, cold and aggressive environments.

## IP 20 CEILING FITTING • 52720-400-10

Straight bases are mainly used for ceiling fitting, but can also be fitted to walls. The IP20 fitting is ideal for both the bathroom and toilet, but is equally suitable in other areas such as the kitchen, hall, stairwell, entrance and basement. In order for IP20 to be employed in zone 3 in a bathroom, a surrounding class globe must be fitted.

The base does not require protective earthing, which is a great advantage in respect of the renovation of older properties. It is environmentally-friendly, does not discolour, withstands heat and harsh environments and is very easy to keep clean. The base is made of high-quality porcelain with white or grey glaze. The white glass glaze has the immediate NCS number S 1502-G50Y and the grey glass glaze the NCS number S 6005-G80Y. The base has a wiring lead-in at the back as well as two ten millimetres switch openings on opposite sides. Connection is directly to the lamp holder, maximum 2 x 1.5 mm<sup>2</sup>.

Supplied with glass gasket.
