

Ifö Electric in Bromölla, on the border between Skåne and Blekinge, by the beautiful Ivö lake, has concentrated on ceramics – Nature's own material – for more than 100 years. After decades in the grip of plastic and metal, both electricians and end-users have discovered the superior properties of ceramics. Easier to keep clean, longer lifespan, enhanced resistance to heat, not prone to discolouring and also withstand damp, cold and aggressive environments.

IP 57 WALL FITTING • 52736-000-10

Slanting bases are nearly always fitted on the wall. The application range for IP57 sockets is immense. They are to be found in bathrooms and toilets, but are equally well suited in other areas such as kitchens, halls, stairwells, entrances and basements. The casing class makes them eminently suited to employment outdoors.

The bases are fully insulated, i.e. they do not need protective earthing, which is an advantage in respect of the renovation of older properties. They are environmentally-friendly, do not discolour, withstand heat and harsh environments and are very easy to keep clean.

The bases are made of high quality porcelain in white (NCS: S 1502-G50Y) or grey (NCS: S 6005-G80Y). All bases have a sealed connection space with two mantle clamps for maximum 3 x 2.5 mm². Extra seal sets for wire lead-in are ordered separately. The bases are supplied with glass gasket.
